EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Lila Akrad on 10/26/06.

The application has been amended as follows:

In The Claims:

At claim 15, "The maize" is replaced with ---Maize---.

At claim 16, ---F1--- is inserted before "hybrid".

At claim 17, "A" is replaced with ---An F1---.

Claim 18 is cancelled.

Claim 24 (Currently amended). The maize plant of Claim 23, wherein the single gene conversion was conferred by a transgene [was stably inserted into a maize genome by transformation].

Claim 26 (Currently amended). The maize plant of Claim 23, wherein the gene confers a trait selected from the group consisting of herbicide tolerance; insect tolerance; resistance to bacterial, fungal, nematode or viral disease; [yield enhancement;] waxy starch; [improved nutritional quality]; and male sterility [and restoration of male fertility].

Claim 27 (Currently amended). The maize plant of claim 26 [23], wherein said male sterility [plant] is conferred by a transgene [further defined as comprising a gene conferring male sterility].

Claim 28 (Currently amended). The maize plant of Claim 13, wherein said plant [is] further comprises [defined as comprising] a transgene conferring a trait selected from the group consisting of male sterility, herbicide resistance, insect resistance and disease resistance.

Reasons For Allowance

Applicant's response filed 10/06/06 in reply to the Request for Information under 37 CFR 1.105 has been considered. The claims drawn to F1 hybrid seed/plants of the inbred PH8CW are deemed free of the prior art of record. Therefore, the Office has determined that the claims drawn to F1 hybrid plants/seed derived from maize inbred line PH8CW have adequate written description, since the F1 hybrid plants/seed contain the unique haplotype of the inbred PH8CW. Claims drawn to methods of using inbred PH8CW to generate PH8CW derived lines and PH8CW plants further comprising a transgene or a single gene conversion are also considered to have adequate written description and are free of the prior art.
